In consideration of receipt of this document, the recipient agrees to treat this information as confidential and to not use or reproduce this information for any purpose other than its original intent or disclose this information to any other person for any purpose, without the express prior consent of Fujitsu Consulting (Canada) Inc. (and any applicable third party.)

Importing Student Photos

You can include student photos in the Students' Details. Either add photos one by one or import all student photos for the whole school at once, (such as after you receive a disk of photos from the photographer). Photo Uploads can be run at the district level but must be loaded school by school.

1.0 To import an individual student's photo

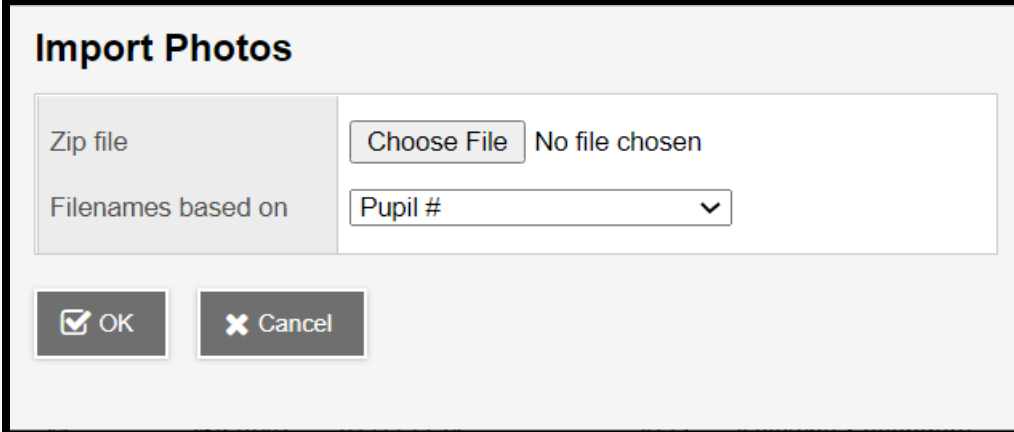

1. School view > Student top tab.
2. Search for and select the student.
3. Click the **Details** side-tab.
4. Either click on the student's photo or click on **Upload** where the photo should be.

5. Click the **Choose File** box and browse to locate and select the appropriate photo file.
6. Click **Import**.
7. Click **Save**.

2.0 To import all student photos

1. School view > Student top tab.
2. Click the Filter menu, select **Primary Active Students** filter.
3. On the Options menu, click Import **Photos**. The *Import Photos* dialog box appears.

The screenshot shows the 'Import Photos' dialog box. It has a title bar with the text 'Import Photos'. Below the title bar, there are two main sections. The first section is for selecting a file, with a label 'Zip file' and a 'Choose File' button. To the right of the button, it says 'No file chosen'. The second section is for selecting the filename basis, with a label 'Filenames based on' and a dropdown menu currently set to 'Pupil #'. At the bottom of the dialog, there are two buttons: 'OK' with a checkmark icon and 'Cancel' with an 'X' icon.

4. Click **Choose File** to find the zip file containing the photos.
5. For the *Filenames based on* field, select **Pupil #** so the system can match the photos to the student records. Click **OK**.
 - a. The supported file formats are jpg, png, gif, bmp and jpeg.
 - b. The photo files must be stored directly in a zip file, not in a directory within the zip file.
 - c. If the photos do not import, they might exist in a directory within the zip file. For example, the zip file called studentphotos.zip might contain a directory called Seniors, which contains all the senior students' photo files. These photo files should be zipped without putting them in a directory.
 - d. The zip file should contain only image files.
 - e. Each photo file within the zip file should be named based on a pupil number.

Recommended File Sizes for Photo Imports

JPG files should be about 15K in size, with a width of no more than 150 pixels and height of no more than 400 pixels, and resolution of 72 dpi.

PNG files should be about 14K in size with a width of no more than 170 pixels and height of no more than 225 pixels.
